

CubDigital 4-5 Day Challenge: AI Slide Builder

Build a focused Next.js app that turns a plain-language brief into branded, editable slides and a saved PDF.

FUN INTERNAL BUILD

THE MISSION

Create a small but polished slide-generation app for a user who wants to describe a deck, preview the proposed slide-by-slide content, then generate and export the final deck as a PDF.

Keep it practical: demo quality matters more than covering every edge case.

CORE REQUIREMENTS

- Next.js app with a clean, usable interface.
- Use ChatGPT 5.5 for the AI workflow.
- Brand kit controls: logo, colors, fonts, tone, and optional image style.
- Preprocess step that shows the planned text/content for each slide before generation.
- Premade slide layouts such as title, section, image/text, quote, comparison, and closing.
- Allow those template elements to be customised or switched off.
- Postgres database for saved projects, brand kits, and generated decks.
- Repos created and saved under CubDigital.
- Text box where the user describes the deck they want.
- Generate slides containing text and images.
- Template controls for page numbers, top-right titles, and bottom logos.
- Save/export the result as a PDF.

EXPECTED DEMO FLOW

- Create or select a brand kit.
- Enter a deck prompt, such as "10 slides for a sales proposal for a local gym".
- Show the AI preprocessor output: slide title, layout, text, image idea, and notes.
- Generate slides, make at least one edit, then export a PDF.

BONUS IDEAS

- Drag-and-drop slide ordering.
- Simple slide editor for text, images, and layout changes.
- Speaker notes generated per slide.
- Image prompt generation or image search suggestions.
- Reusable theme presets for different clients or industries.
- Version history: prompt, preprocessed plan, and final deck.
- Export to PPTX as well as PDF.
- Autosave and a recent decks dashboard.
- Basic collaboration: comments or "needs review" status.
- Brand compliance warnings, such as low contrast or missing logo.

JUDGING CRITERIA

Working end-to-end demo: prompt to plan to slides to PDF	30%
Quality of UX and editing flow	20%
Brand kit and template customisation	15%
AI preprocess quality and usefulness	15%
Code quality, data model, and repo hygiene	10%
Creativity, polish, and thoughtful bonus features	10%

QUALIFICATION RULES

- Must run locally from a README with clear setup steps.
- Must use Next.js, Postgres, and ChatGPT 5.5.
- Must include at least three premade layouts.
- Must save at least one deck/project to the database.
- Must produce a PDF during the final demo.
- Teams should be ready for a short demo and code walkthrough.
